

HR Dashboard

Project Requirements Document • Tableau

Project Overview

As an HR manager, I want a comprehensive dashboard to analyze human resources data, providing both summary views for high-level insights and detailed employee records for in-depth analysis.

1. Summary View

The summary view is divided into three main sections: Overview, Demographics, and Income Analysis.

1.1 Overview

Provides a snapshot of overall HR metrics:

- Display the total number of hired employees, active employees, and terminated employees.
- Visualize the total number of hired and terminated employees over the years.
- Present a breakdown of total employees by department and job titles.
- Compare total employees between headquarters (HQ) and branches — New York is the HQ.
- Show the distribution of employees by city and state.

1.2 Demographics

Offers insights into the composition of the workforce:

- Present the gender ratio in the company.
- Visualize the distribution of employees across age groups and education levels.
- Show the total number of employees within each age group.
- Show the total number of employees within each education level.
- Present the correlation between employees' educational backgrounds and their performance ratings.

1.3 Income Analysis

Focuses on salary-related metrics:

- Compare salaries across different education levels for both genders to identify any discrepancies or patterns.
- Present how age correlates with salary for employees in each department.

2. Employee Records View

- Provide a comprehensive list of all employees with necessary information such as name, department, position, gender, age, education, and salary.
- Users should be able to filter the list based on any of the available columns.

Requirements Summary

Section	Sub-section	# Requirements
Summary View	Overview	5
Summary View	Demographics	5
Summary View	Income Analysis	2
Employee Records View	—	2
Total		14
